

Mounting instructions for the Duo Laser Pointer

Podoblock B.V
Verlengde Nijverheidsweg 10
9482 WT Tynaarlo
The Netherlands
info@podoblock.com

Your Duo Laser Pointer comes with the following items:

- A. Laser Unit
- B. 2x White Adhesive Discs
- C. 2x Magnetic Discs
- D. 2x Hexagonal Wrenches
- E. 6x Lithium Batteries
- F. 10x Adjustment Plates

Unpack your items and take the following steps:

1. Place the laser unit on the magnetic disc.

2. Place the white metal discs onto the black magnets with the adhesive side facing downwards.

3. Determine the correct position on the generator, remove the strips from the metal discs and stick the unit onto your source.

4. Place the Duo Laser Pointer onto the magnetic discs

5. Turn on the lasers by pushing the black buttons downwards. Then determine your focal distance and align the lasers to one focal point.

If the laser points don't meet at the cross hairs projected by the collimator light, adjustments can be made.

6. To do so, move the lasers with the supplied small Hexagon wrenches into the recessed screw hole until the projected beams center on top of each other.

7. In order to make adjustments on the elevation angle, use the large Hexagon wrench and exchange with the adjustment plates of your choice.
