SAFE & EFFICIENT DENTAL IMAGING

Dental Solutions

Dental X-rays

Dental X-ray has become an essential part of modern equine dentistry. Obtaining high-quality dental images can be challenging due to the variety of imaging angles, working positions and anatomical structures involved.

Podoblock develops practical solutions that support veterinarians and equine dental professionals during dental imaging procedures. Designed with safety, ergonomics and efficiency in mind, our products help create a more comfortable workflow while supporting accurate and repeatable dental X-rays.

XtandR

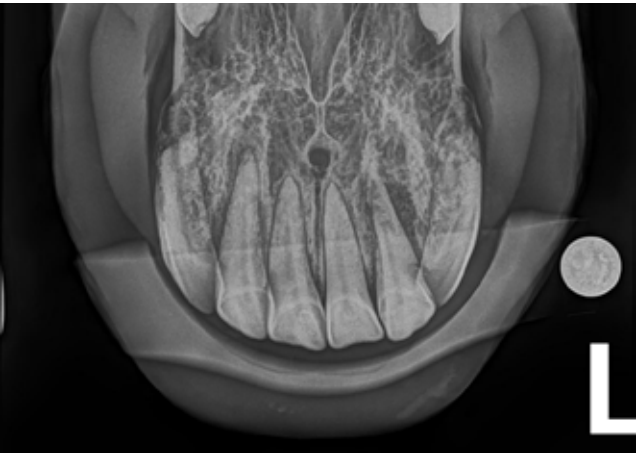

The XtandR is a revolutionary set of interchangeable radiolucent bite plates for equine head radiographs. The XtandR is only intended for taking X-rays of the incisors.

The bite plates are designed to fit all speculi on the market.

According to the official DAkKS-DKD-R 3-3 regulation, these radiolucent bite plates have been tested and can withstand a pressure of 5.13 kN / 1131 lbs.

Radiolucent bite plates sample X-ray

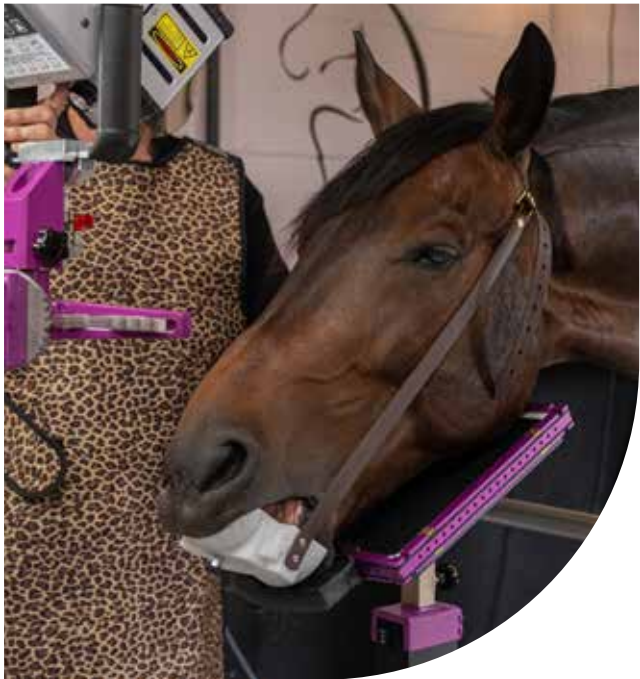

The Juliuster
Designed, tested and approved in collaboration with the European Equine Dental Consultancy.

Easy-to-use device to offset the lower jaw to the left or right for open-mouth views with offset-technique.

Ideal for investigating the roots and occlusal surfaces of the cheek teeth. Dorso-ventral views can be made with a 0.2" offset to the left and right.

Dental X-Block
Can be used directly between the incisors to quickly create 2.4", 3.2" or 4.0" of space.

Mix & Match

Head Stand
The Head Stand is a modular positioning system designed for hands-free skull, head and neck radiography. By combining different base elements with interchangeable head units, the system can be configured to suit a wide range of imaging situations.

Choose between a manual or electric base element and combine it with one of five compatible head units. From detector positioning with the 3D-Joint to radiolucent headrests and LM-Head support, each configuration is designed to support safe, accurate and efficient imaging.
